

Model-The Water Box

Global Water™ Series

The Water Box – The under-the-sink filtration solution.

The Water Box was designed to deliver the best quality ambient water at the most economical price. It taps directly into the cold water line and fits under any sink, keeping it out of sight and eliminating the need to utilize valuable countertop or floor space.

The system can be equipped with a 4 stage Reverse Osmosis purification system that can produce up to 50 gallons of pure, fresh drinking water per day. The Water Box also has a 2.3 gallon, stainless steel containment tank built right inside. It comes with a designer lead-free faucet that is sure to be a welcome addition to any decor. It has additional features such as a blue LED light that lets you know when it's time to change the filters as well as a backwash system that recirculates purified water throughout the system, ensuring that filters continue to operate at peak performance. The Water Box also features "quick-change" cartridges that make filter changes even simpler.

SPECIFICATIONS

Dimension: 15"W x 9"D x 13"H

Water connection: 1/4" tubing

Weight: 10 lbs (dry)

Does not require power source

OPTIONS

With 4 stage 50 GDP RO system chrome faucet

With 4 stage (UF) ultra-filtration membrane

With upgrade brushed nickel faucet

With 3 stage filtration

Without faucet

Add 3.2 gallon storage tank

Filtration System

3 Stage Filtration or 4 Stage Reverse Osmosis Filtration Technology

STAGE 1

5 Micron Sediment Filter

The first stage is a 5 micron Sediment filter that helps remove Sediment such as sand, rust and silt that is present in most municipal water sources.

STAGE 2

1 Micron Granulated Activated Carbon Filter

The second stage of filtration is a 1 micron granulated activated Carbon filter. This filter uses an advanced Carbon technology to help remove harmful particles such as pesticides, insecticides, petrochemicals, MT-BE's, PCB's, defoliants, and benzene.

STAGE 3

0.5 Micron Carbon Block Filter

The third stage is a 0.5 micron Carbon block filter, which gives the water a final "polish." It removes up to 99% of lead and microbial cysts such as giardia and cryptosporidium. It also ensures that all chlorine has been removed and that the water entering the holding tanks is completely odorless.

- OR -

STAGE 4

Reverse Osmosis Technology

The fourth stage utilizes Reverse Osmosis technology, which removes any molecular compounds smaller in size than water molecules. Such compounds include salt, magnesium, iron, fluoride, lead, and calcium.
