

Model-G5

Global Water™ Series

G5 – The higher-end sleek and modern model with additional features and upscale design elements.

The G5 offers a more sleek and modern design, with a microprocessor control panel and a blue LED light that illuminates the dispensing area. It dispenses hot, cold and ambient water temperatures, and also features a smart technology drip tray that alerts when it needs to be emptied.

SPECIFICATIONS

Dimension: 13"W x 14"D x 48"H

Shipping weight: 77 lb

Cold tank volume: 1 gal

Hot tank volume: .5 gal

Room temp. tank volume 2.3 gal

Cooling rate 1.5 gal/hr 37-50 °f

Heating rate 1.3 gal/hr 180 °f

FEATURES

- Large dispensing gap ideal for filling large bottles
- Smart technology drip tray lets you know when it needs to be emptied
- Hidden built in cup holder for flat or cone shaped cups
- Stainless steel hot and cold tanks
- LED Blue light that illuminates dispensing area
- Individual on/off power switches for hot and cold water

OPTIONS

G5 with 4 stage 50 GDP RO system

G5 with 3 stage filtration

G5 with 3 stage (UF) ultra-filtration membrane

Filtration System

3 Stage Filtration or 4 Stage Reverse Osmosis Filtration Technology

STAGE 1

5 Micron Sediment Filter

The first stage is a 5 micron Sediment filter that helps remove Sediment such as sand, rust and silt that is present in most municipal water sources.

STAGE 2

1 Micron Granulated Activated Carbon Filter

The second stage of filtration is a 1 micron granulated activated Carbon filter. This filter uses an advanced Carbon technology to help remove harmful particles such as pesticides, insecticides, petrochemicals, MTBE's, PCB's, defoliants, and benzene.

STAGE 3

0.5 Micron Carbon Block Filter

The third stage is a 0.5 micron Carbon block filter, which gives the water a final "polish." It removes up to 99% of lead and microbial cysts such as giardia and cryptosporidium. It also ensures that all chlorine has been removed and that the water entering the holding tanks is completely odorless.

- OR -

STAGE 4

Reverse Osmosis Technology

The fourth stage utilizes Reverse Osmosis technology, which removes any molecular compounds smaller in size than water molecules. Such compounds include salt, magnesium, iron, fluoride, lead, and calcium.

Filter life 2,500 Gallons or every 6 months
(whichever occurs sooner)
